

# **Impact of Demographic Changes: Urbanization, Aging and Employment**

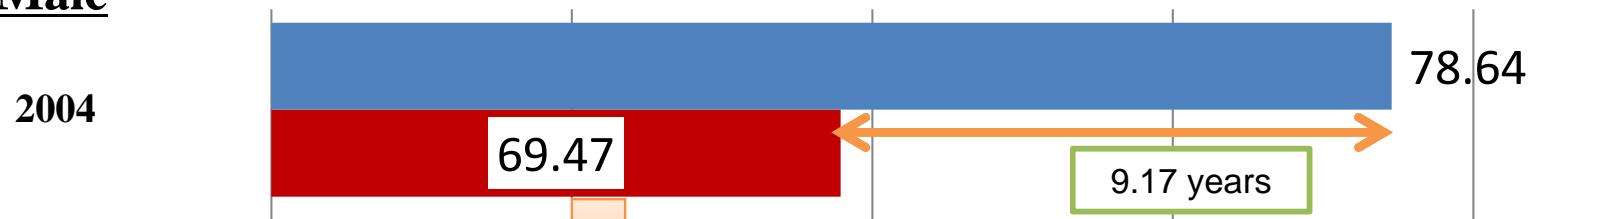

**Yasuhisa Shiozaki**

Member, House of Representatives, Japan  
November 26th, 2017

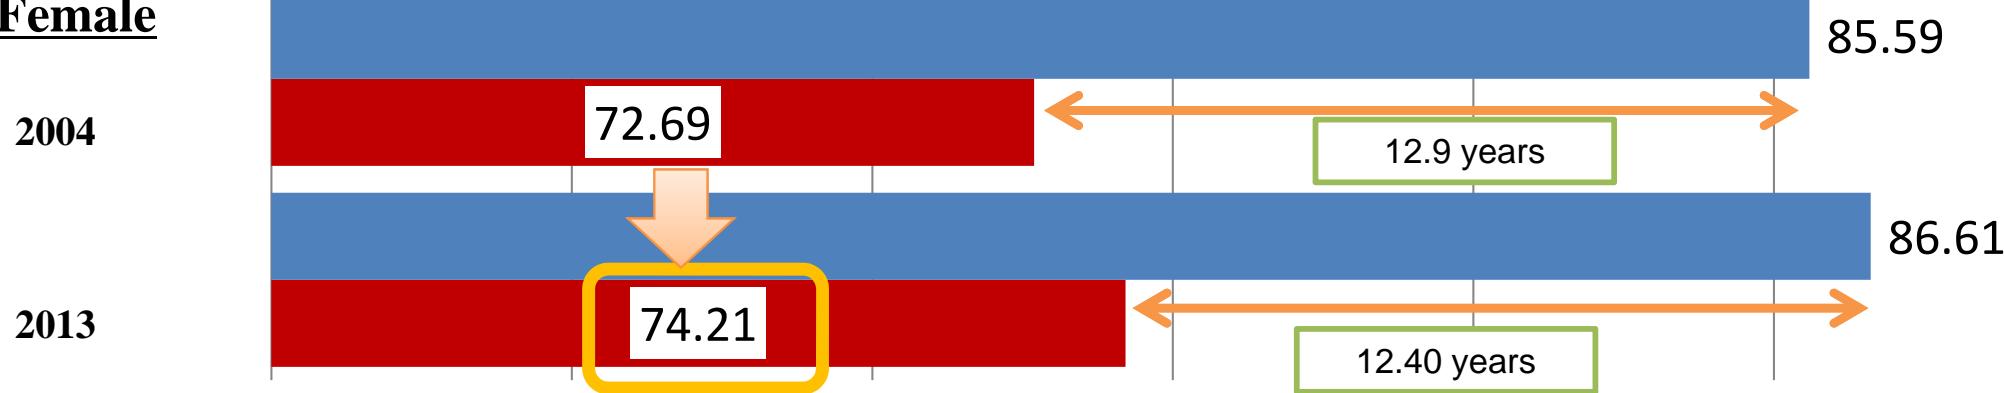

# Average “Life Expectancy” and “Healthy Life Expectancy” in Japan

\*Healthy life Expectancy : Years in which people lead daily life without any self-assessed constraints

**Male**

**Female**

■ Average Life Expectancy

■ Healthy Life Expectancy

## Data Source

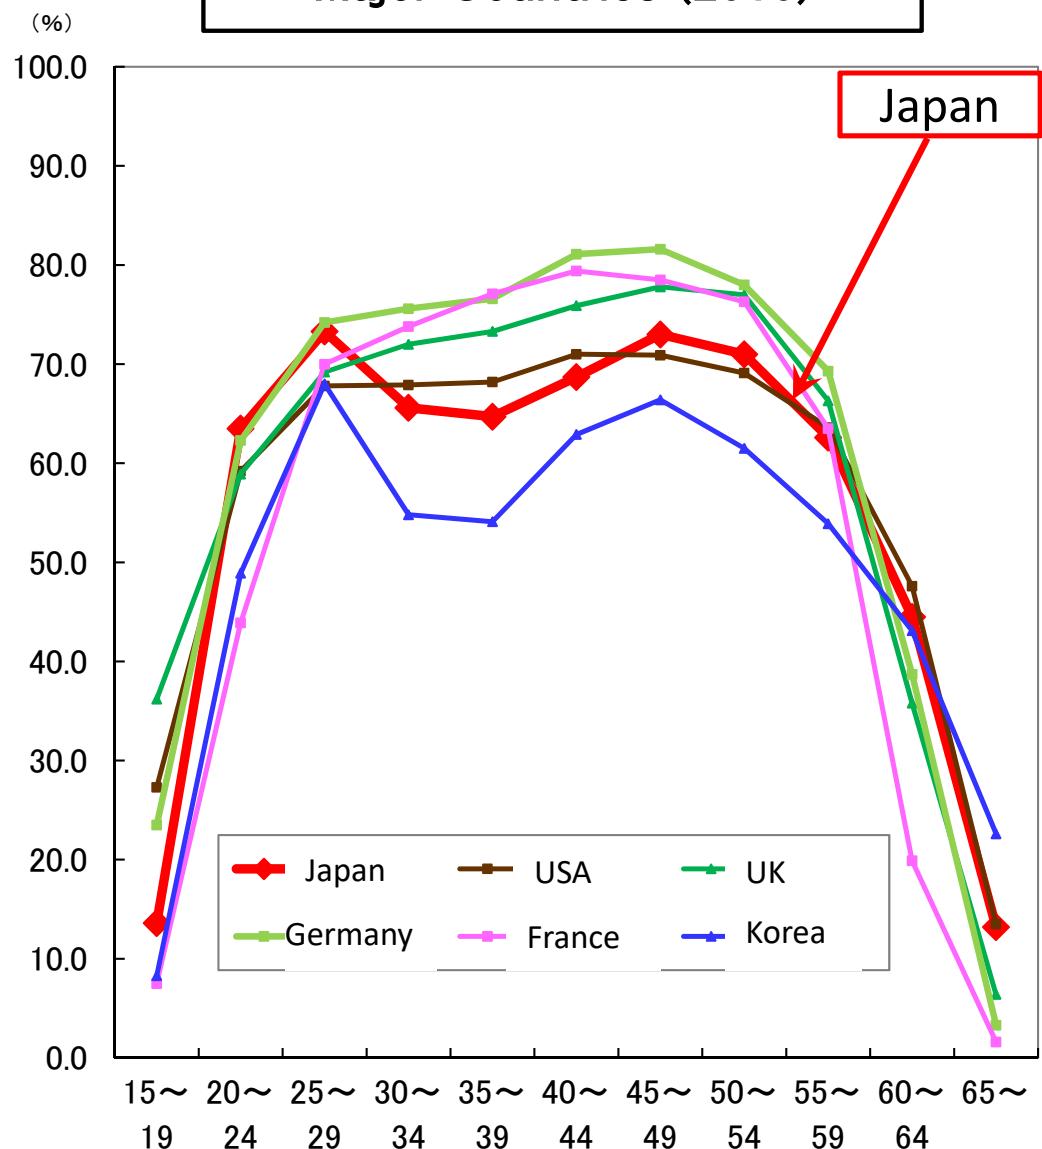

MHLW “Complete Life Table 2010”, “Abridged Life Table 2013”.

MHLW “Abridged Life Table 2010/2013”, “Vital Statistics 2010/2013”, and “National Livelihood Survey 2010/2013”.

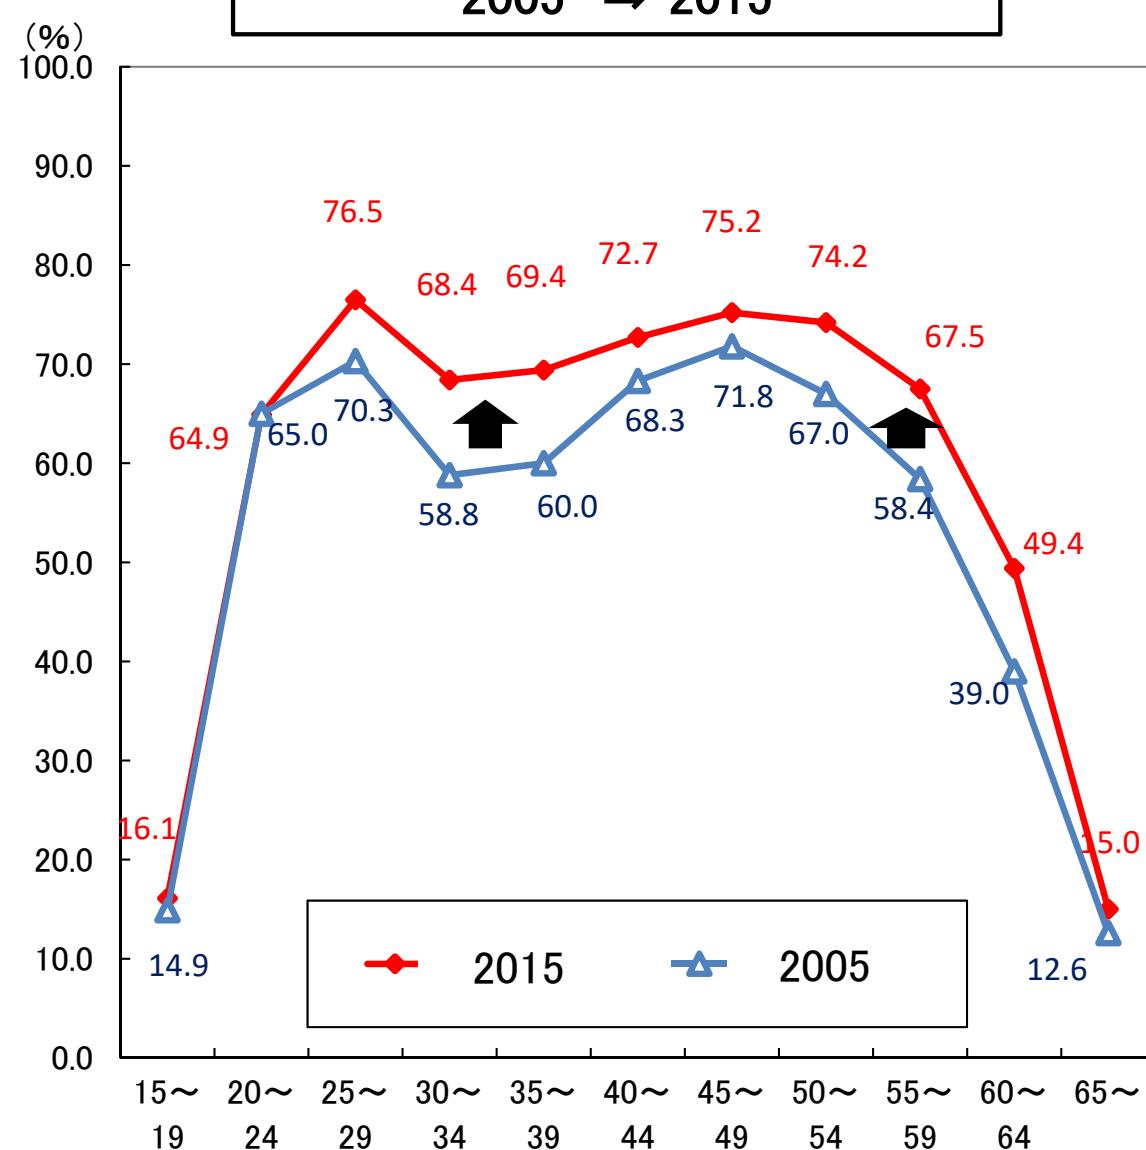

Ministry of Internal Affairs and Communications “Estimated population 2010/2013”.

# Women's Employment Rates by Age

Major Countries (2010)

Japan  
2005 ⇒ 2015

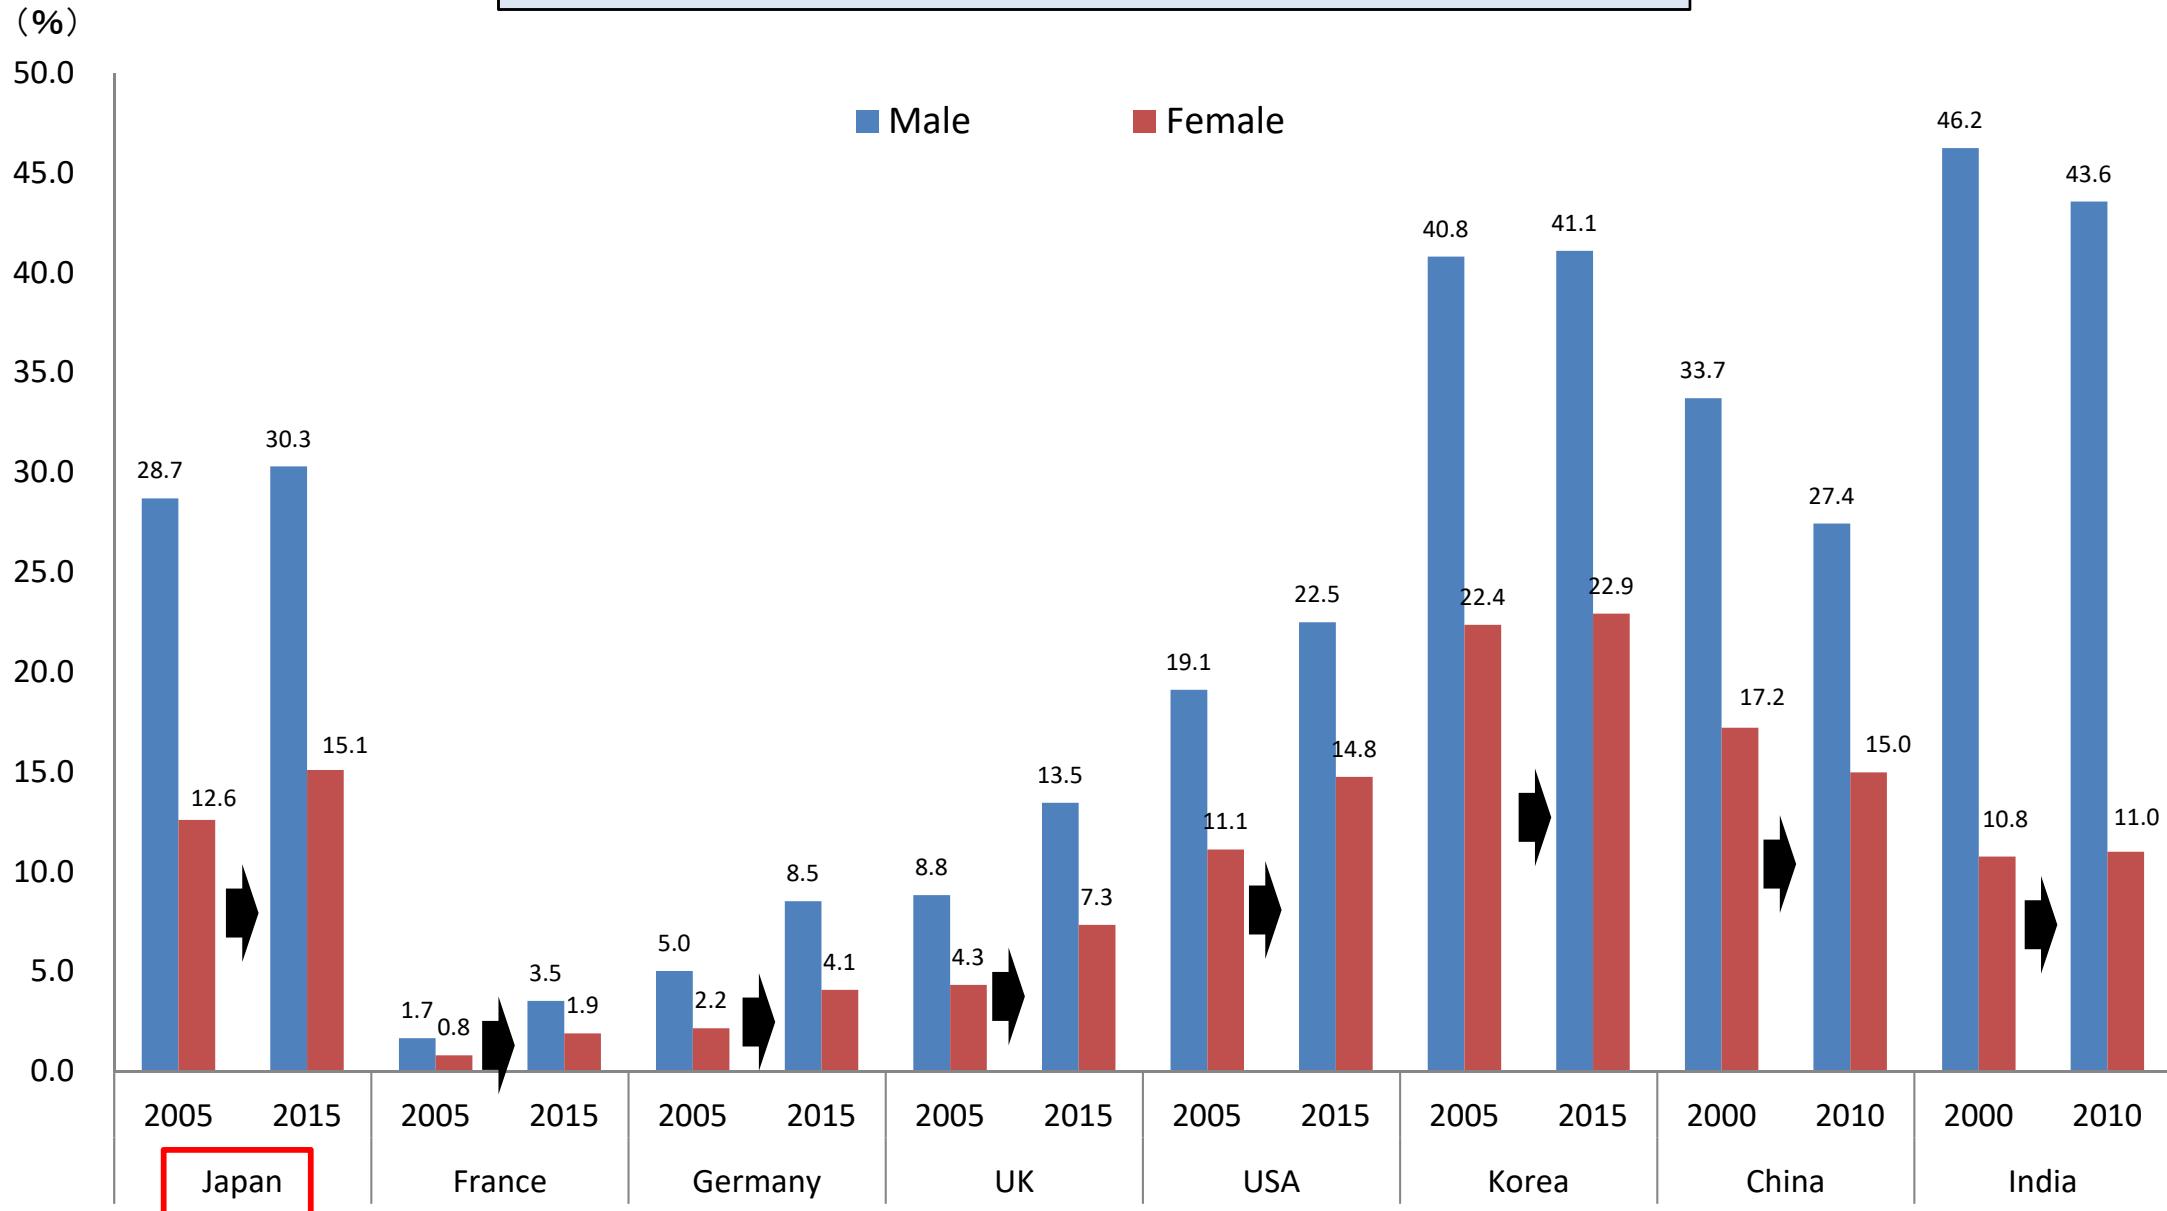

Sources: Japan - MIC's "Labour Force Survey" ;  
other countries – OECD Database "LFS by Sex and Age"

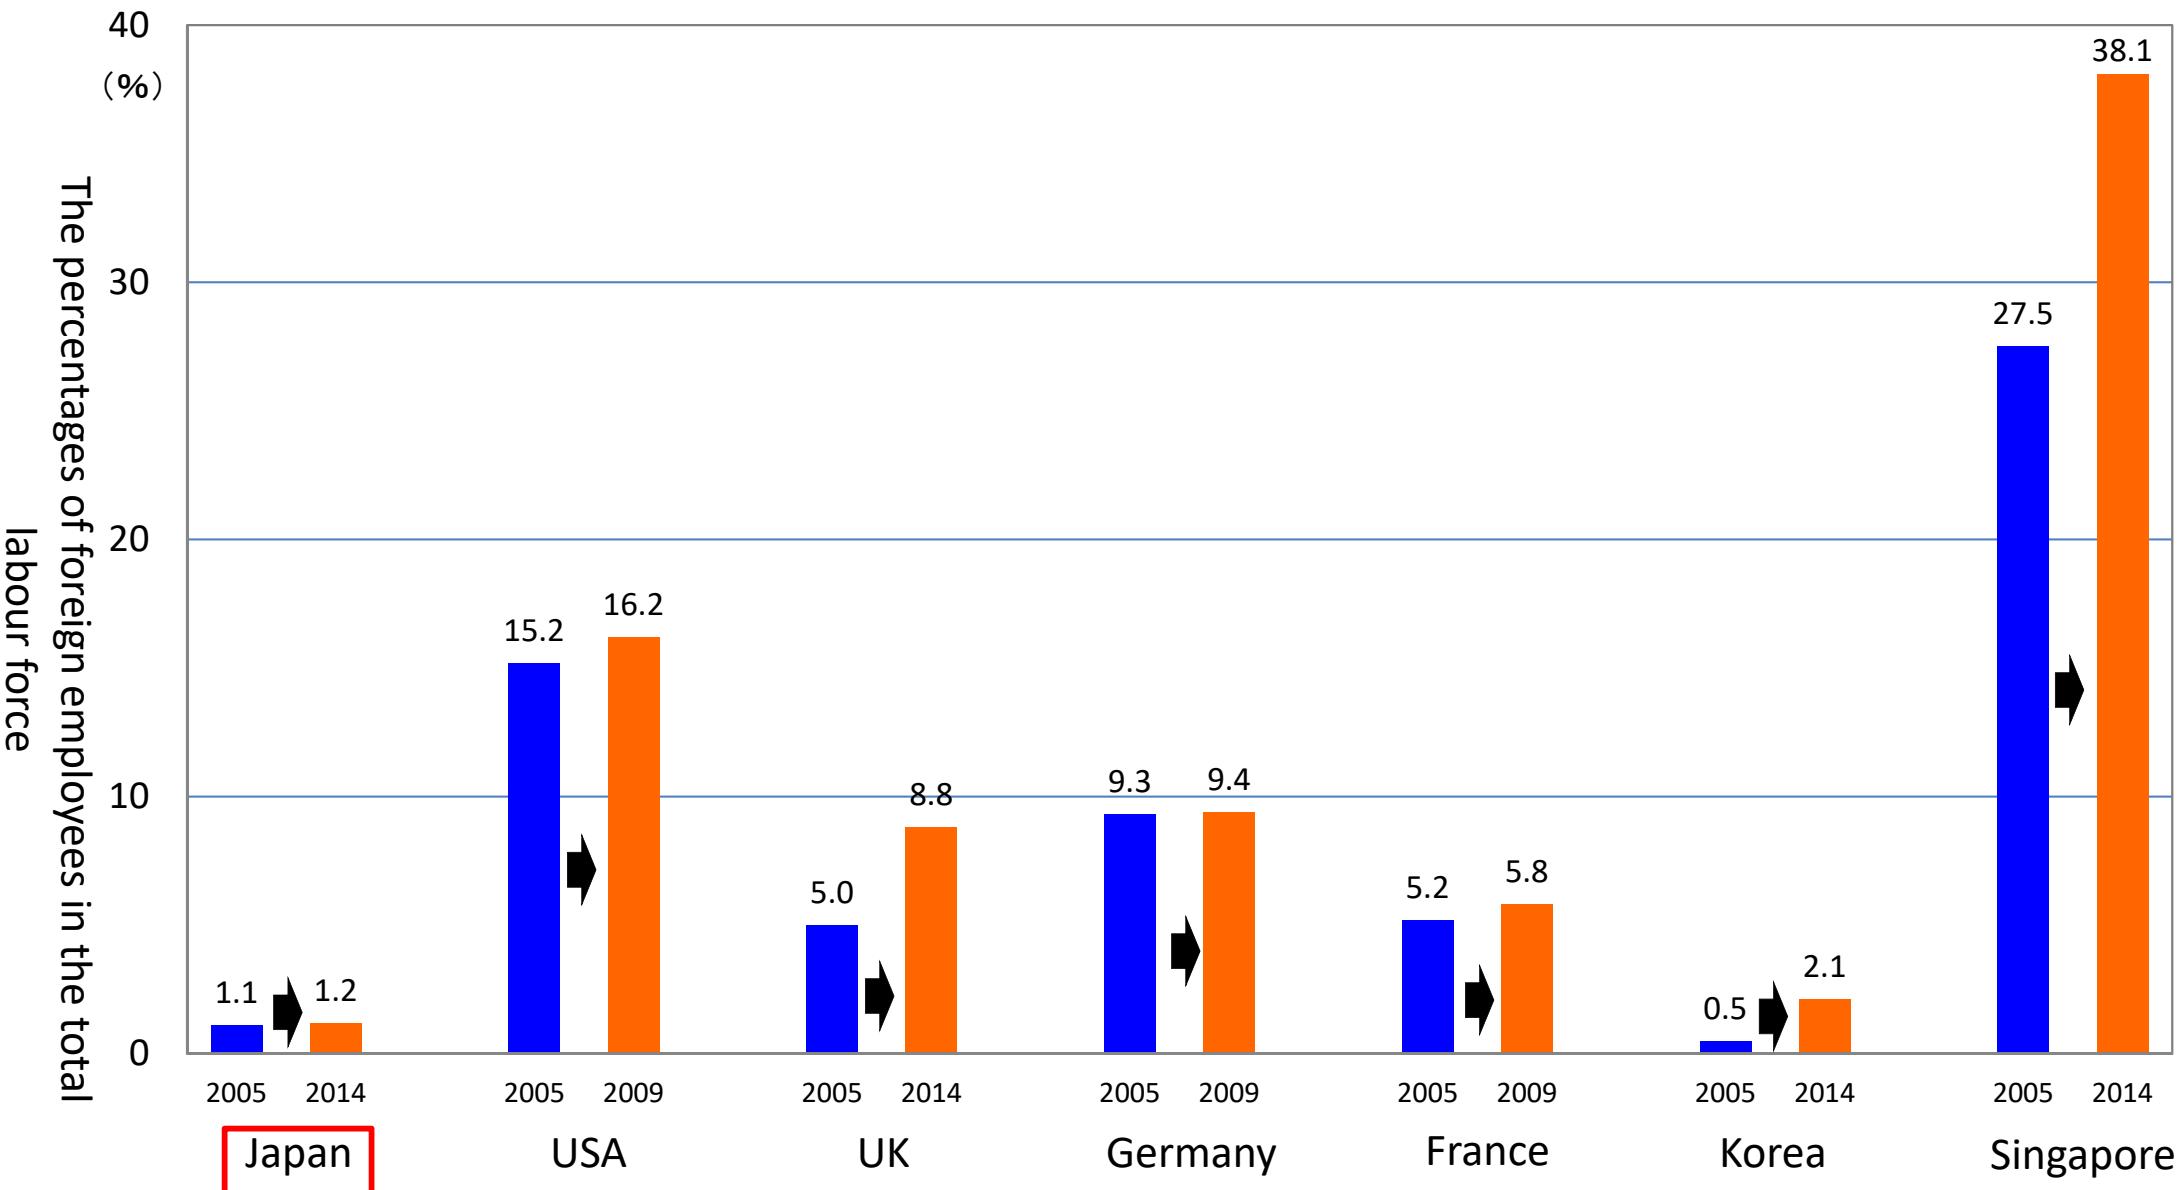

Notes) For US, UK, and Sweden's age group "15~19," data from age group "16~19" is used; similarly, "65~" for Sweden uses data from "65~74."

# Employment Rates for the Elderly

# Labour Productivity (man-hour)

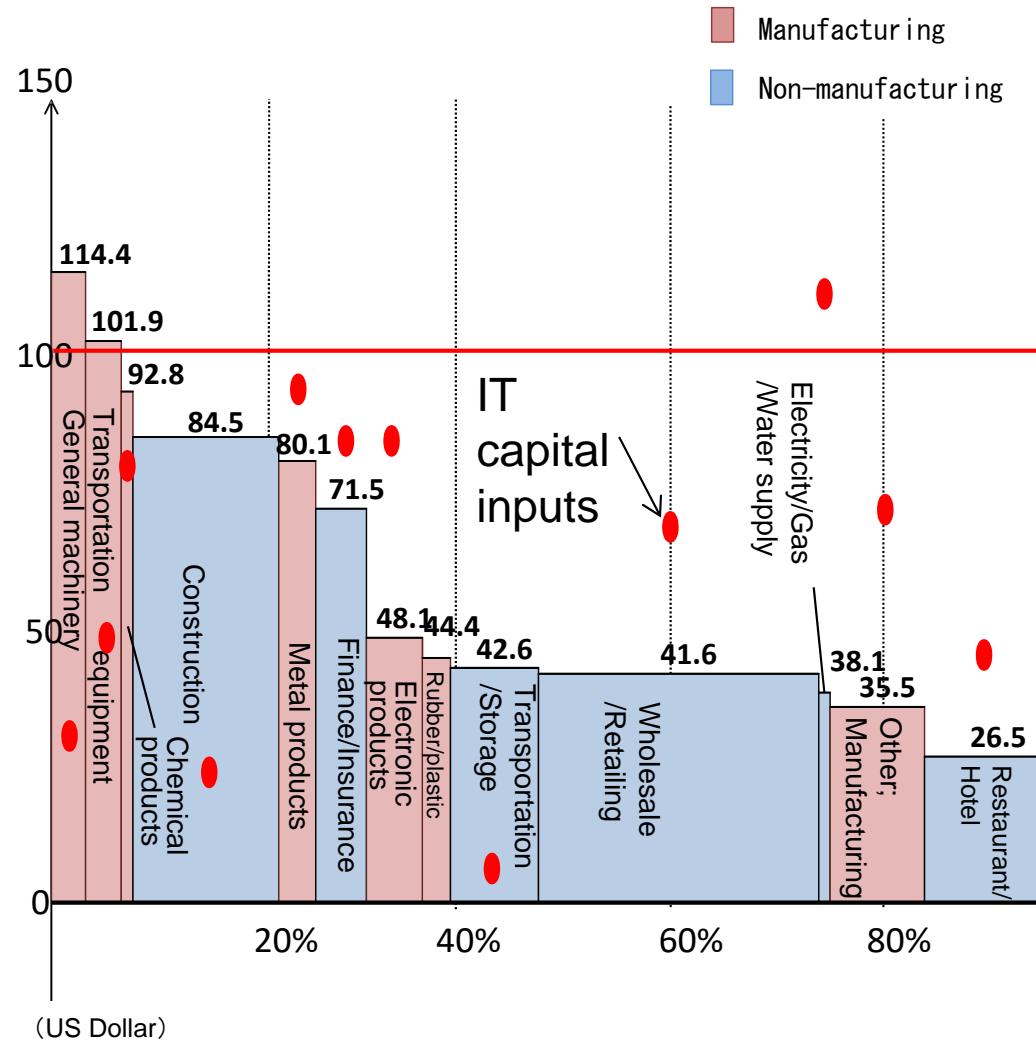

Labour Productivity among Major Countries

Source Produced based on OECD.Stat.

(Notes) It should be noted that the Purchasing Power Parities used for international comparison of labour productivity have concerns arising from varying qualities of selected goods and services depending on countries concerned, and so on.

Labour Productivity of Japan and IT Investment (vs. US)

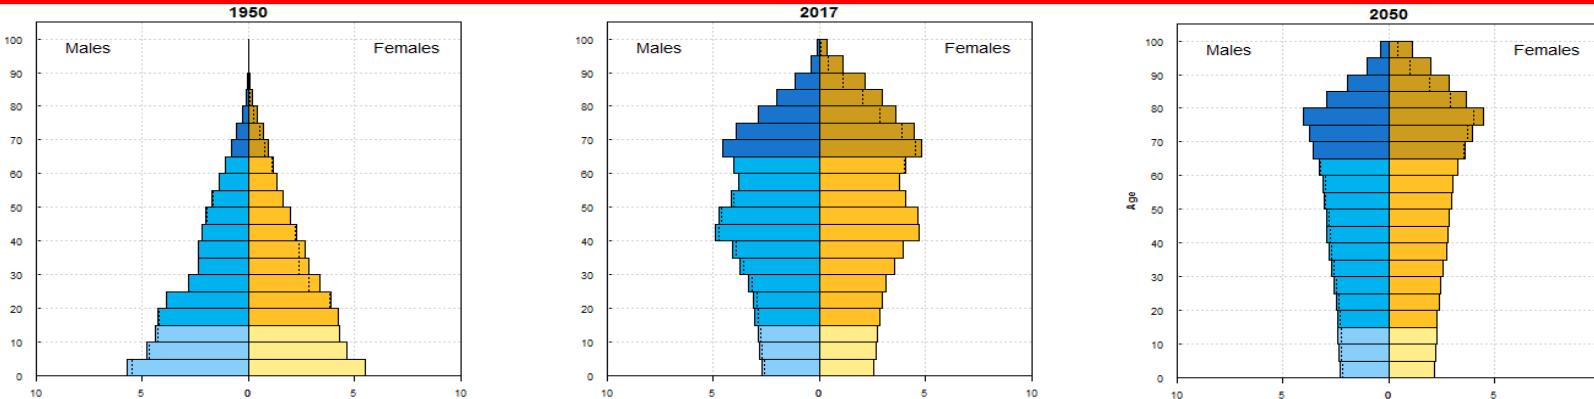

※Vertical axis : Labour Productivity or IT capital inputs (US=100) Horizontal axis : Share of workers (averages between 2007 and 2009). The man-hour labour productivity levels are the average values from 2007 to 2009. The IT capital inputs are the average values from 2000 to 2006 based on man hours. The data for labour productivity levels are compiled by the Counsellor's Office for Labour Policy, MHLW, based on the documents of the 14<sup>th</sup> Council on Fiscal and Economic Policy in 2015. The data for IT capital inputs are also compiled by the Office of the Counsellor for Labour Policy of the MHLW based on data submitted by the Groningen Growth and Development Center (GGDC).

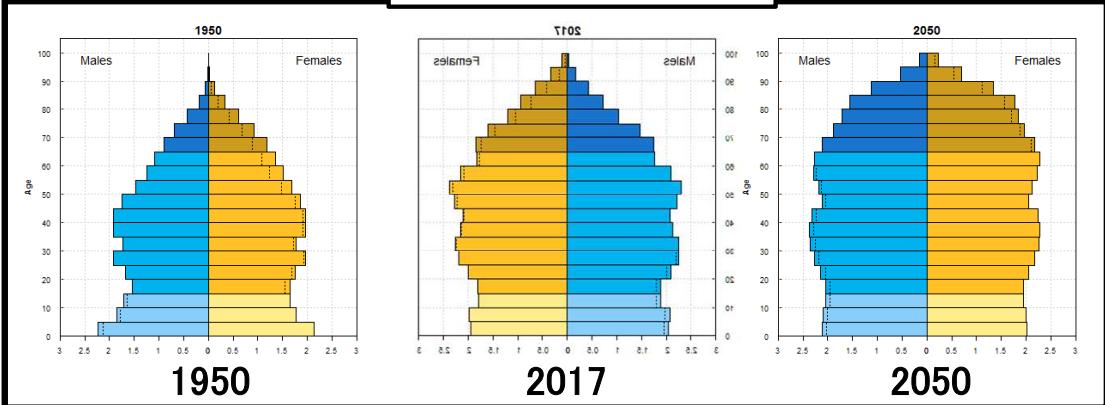

※Setting the U.S levels of IT capital inputs and the labour productivity as 100, Japanese levels were calculated.
